VERSION WITH MARKINGS TO SHOW CHANGES MADE

In the claims:

Claims 3, 6 and 13 have been amended as follows:

3. (Amended) Apparatus according to claim 1, [or 2] wherein the moveable system has terminals with provision for connection of a cellular handset, and means for transferring audio signals from the cellular handset to an audio output of the terminals.

6. (Amended) Apparatus according to claim 1, [2, 3, 4 or 5,] wherein the movable system has means for generating an association between an identity code of a destination node of the tracking radio link and an identity code of a cellular radio telephone, and means for storing the said associated identities in stores associated with the fixed and moveable cellular switching systems, thereby allowing both cellular radio switching systems to translate between the cellular radio identity and the node identity.

13. (Amended) Method according to claim 11, [or claim 12] wherein the tracking radio link is a satellite link having means for changing the satellite through which it is routed, and wherein a call in progress can be maintained when the satellite through which the tracking link is routed is changed.
